PROFESSIONAL SUMMARY

Backend-focused software developer working mainly with C#, with a strong interest in system logic, software architecture and thoughtful problem-solving. Experienced in building back-end systems and APIs, while open to full-stack opportunities when needed. Passionate about understanding problems in depth and designing clean, scalable and maintainable solutions. Experienced with modern frameworks and both SQL and NoSQL databases.

EXPERIENCE

Grupo CCR, Backend Developer (Mid-level) — Póvoa de Varzim, Portugal

July 2025 - Present

- Working on a company-wide internal project addressing needs across multiple departments, with a strong focus on HR, Safety and shipyard/worksite operations.
- Developed core features such as an employee time & attendance system for multiple departments, machine and equipment management, and on-site safety inspection workflows.
- Took an active part in the architecture decisions of the project, discussing and defining patterns and module boundaries together with the team.
- Worked directly with the departments that use the system to understand their needs and turn them into technical requirements, keeping the delivered features aligned with their day-to-day work.
- Designed and implemented an integration testing system from scratch using xUnit, including a flexible seeding strategy that supports large datasets and reliable test execution.
- Implemented CI using Azure Pipelines to automate build, deployment and integration test execution, increasing release reliability and development confidence.
- Planned a gradual transition from a monolithic architecture to a modular monolith, enabling incremental adoption without blocking the team or requiring a large-scale refactor.
- Currently introducing observability using Loki and Grafana to improve logging, monitoring and system diagnostics.

Technologies used: ASP.NET Core 8, PostgreSQL, Azure DevOps, xUnit, Loki, Grafana.

Coderstein, Fullstack developer — Remote

June 2024 - July 2025

At Coderstein, I worked on two large internal projects focused on event management. These systems included features like creating itineraries and managing events with over 1,000 participants. Some of my contributions were:

- **Role Management System:** Created a system to manage user roles and permissions, improving security and making access control more straightforward.
- **Guest Management Improvements:** Made several upgrades to the guest management system, focusing on performance and functionality. These improvements ensured the platform could handle thousands of guests quickly, making it more efficient and user-friendly.
- **Analytics Tool:** Built a tool that allowed event organizers to generate custom reports and get detailed insights into their events.

I added end-to-end tests using Jest and Playwright. We used agile methods along with Linear to manage tasks and stay organized, which helped keep the team on track and productive.

Technologies used: NestJS, PostgreSQL, Jest, Playwright, React.

Fullstack Developer**April 2023 - June 2024**

Developing personal projects with .NET, NestJS, TypeScript, and Next, creating robust websites and APIs. Utilizing Git and GitHub for version control.

Valeo, Technical Electrician**June 2021 - April 2022**

As a technical electrician, I learned to solve complex problems logically and precisely. Attention to detail and adherence to technical specifications are skills that I directly apply to software development. Working with various systems and quickly adapting to new technologies reinforced my ability to learn and innovate continuously in programming.

AWARDS

- 2023 – Gold medal in the regional chess tournament of northern Portugal.
- 2023 – Gold medal in the district chess tournament of Viana do Castelo, Portugal.
- 2019 – Bronze medal in OBMEP (Brazilian Mathematics Olympiad).
- 2019 - Bronze medal in OBA (Brazilian Astronomy Olympiad).
- 2017 - Bronze medal in OBMEP (Brazilian Mathematics Olympiad).
